PLEASE READ this folder carefully.  
An effort has been made to answer  
all important questions that may  
arise respecting the “Elevette” or  
the *INCLIN-ATOR*.

INCLINATOR COMPANY OF AMERICA  
HARRISBURG · PENNA. · U.S.A.

## THIS MODERN HOME

was originally built without providing for the convenience of Elevator Service.

THEN the owner discovered how easily and economically an "Elevette" could be installed. The only change necessary was that of cutting the second floor railing to provide a gate.

YOU—who may find Stairs a Hardship—can also have Modern Elevator Convenience at moderate cost.

Testimonials from many users throughout the United States and Canada indicate their universal approval of these Simplified Electric Lifts for the Home.

"Elevette" becomes a part of the furnishings

# "Elevette"

The "Elevette" is a new and unique form of elevator, especially adapted to private homes because of the simplicity of installation and comparatively low cost.

Where stairs are not adapted to the *INCLINATOR*, the "Elevette" steps in to solve the problem. It can be located in the stairwell, in a closet, or in the corner of a room.

The cars are built with solid panels or open-mesh metal grille imitating woven cane. They may be finished in any style or color to harmonize in a pleasing manner with the surroundings. The platform of the car can be made any size or shape to fit the available space, up to a capacity to accommodate a wheel-chair.

No superstructure, or overhead construction, is required. The car is supported on a single

"Elevette" ascending to second floor

channel. This steel channel, the steel cables and the wiring conduits, are built into a single post harmonizing with the adjacent woodwork. When the car is at the top there is nothing to detract from the appearance of the room (see illustration at right).

The power unit is usually placed in the basement. Full electrical control is provided, including automatic stops, operating buttons on the car, and send and call buttons on all floors. Safety from every possible angle has been given full consideration.

Electrical and mechanical interlocks are provided, and where the car descends into an open room, our safety stop diaphragm under the car gives absolute protection. Any slight pressure on this subfloor immediately stops the car, thus making it impossible for the weight of the car to rest on anything underneath. Even the pet kitten may safely sleep on the rug at this point. This safety feature used in this manner was originated by us.

"Elevette" owners are elated to find how thoroughly practicable and serviceable the machine is. A few days, with comparatively little tearing up, is sufficient to make the installation.

INCLIN-ATOR

INCLIN-ATOR does not interfere with customary use of stairs

*INCLIN-ATOR fitted with special invalid chair (removable)*

## INCLIN-ATOR

The *INCLIN-ATOR* is a miniature incline elevator designed to be placed on the stairway of the private home. The car (or chair) is supported on a roller truck running within a specially constructed steel channel, secured close along one side of the stairway.

The car is constructed with folding platform and seats, so that, when not in use and folded, it takes up very little space along the wall—only about 5 inches. The installation does not restrict the customary use of the stairway.

The car is operated up and down the stairs by a small electric power unit placed in the basement or elsewhere, out of sight, and connected to the standard house lighting current. No special power circuit is required.

The operation is controlled by switch buttons placed on the car itself, and at both top and bottom of the stairs. Limit switches automatically stop it at the end of travel without any thought on the part of the operator. Extreme

strength and safety devices insure absolute safety from every viewpoint.

The appearance is pleasing rather than otherwise. Specially finished in oak, walnut, or mahogany, to match or harmonize with the surroundings, it is recognized as a beautiful piece of furniture, fitting in in perfect harmony with its environs.

The *INCLIN-ATOR* fills a long-felt want, giving the home the advantages of an elevator at a fraction of the cost and without cutting or defacing the building. In households where there are physically disabled, heavy or aged persons, or those afflicted with heart or asthma troubles, the *INCLIN-ATOR* proves to be a real benefaction.

Special attachments in the shape of folding back-rests, swivel chairs with back and arms, etc., are furnished where the condition of the patient requires. These are designed to be readily detachable.

*INCLIN-ATOR ascending stairs*

The universal satisfaction that is enjoyed by the hundreds of owners of *INCLIN-ATORS*, and their desire to let others know the assistance and convenience rendered them by the device, proves to be our greatest selling asset. A list of owners in your locality will be furnished on request.

### WHAT USERS HAVE TO SAY:

"We have forgotten that stairs are in existence in our home."—  
*Alabama.*

"This wonderful, almost magical contrivance has been a God-send  
to me."—*Philadelphia.*

"The *INCLIN-ATOR* is highly satisfactory, and my mother very  
happy with it."—*Oregon.*

"It is a great comfort and pleasure. We are perfectly delighted with  
the *INCLIN-ATOR*."—*Chicago.*

"We have found the "Elevette" to be perfectly satisfactory in every  
way."—*Pennsylvania.*

"I don't know how I could possibly do without the "Elevette."—  
*After 3 years' service.*

*Only a few days are required to install either of these wonderful devices. One of our engineers will, without obligation, call and explain the equipment best suited to your needs, and give approximate cost.*
